Linnæus University

Finalizing the MDSE Project

We are quickly closing in on the final week of the project course. This document provides information about how the remaining individual activities in the course

Individual report

You are expected to provide a written an a personal reflection report based on the project and the MDE theory you learned and practiced in the course.

The report focuses on some questions you should reflect upon and answer/discuss on a maximum of half a page each (same format as above, maximum of 2.5 or 3 pages). Use your project to illustrate your discussion/reflections.

- Explain briefly the core components and their responsibilities in an MDSE system
- What are the core benefits of MDSE?
- What are the challenges/limitations of the MDSE approach?
- Describe and discuss how you approach a problem and design a solution when you intend to use an MDSE approach.
- Enumerate, motivate, and discuss three software engineering practices that must adopt to MDSE if you decide to use MDSE in your project.

Send it by Sunday, January 18

Points Section

In the last part of the report, list the names of the participants in your group and distribute 10 points among them, yourself included. The distribution of points should reflect your viewpoint on the contribution of each participant to the project. More points mean more contribution. Rational numbers are allowed, not only integers.

Retakes

If you cannot submit the report on time or it does not get a pass grade, you can submit a retake before February 22.
